

SUMMARY

Close to a decade in B2B sales, marketing and key-account management — owning revenue and delivery, pricing the deal, running the project, and translating technical constraints into commercial decisions. Now spending every waking hour learning AI and building with it.

AI PRODUCTS I'VE BUILT FOR MYSELF

The Job Qualifier — agent built on Hermes *Shipped & running*
Reads a role against my verified profile and tells me straight whether I qualify — and where I don't. It cannot invent a qualification I don't have: every claim has to trace back to evidence, or it gets flagged.

Investor Research & Outreach — 2-agent pipeline on Hermes *Pre-deployment*
Turns a pitch deck into a ranked list of genuinely matched investors with verified emails, then drafts the outreach. How confident it is decides how much it does alone — strong matches queue a draft, borderline ones come to me, weak ones never surface. Nothing sends without my second confirmation.

SKILLS

Agentic AI architecture · Workflow automation using Hermes agents · LLM fundamentals · RAG · AI ethics · Evals · Problem discovery · Roadmap scoping · Prioritisation logic & trade-offs · Market analysis

EXPERIENCE

Aayo App — Product & Business Advisor (pro-bono), pre-seed event-discovery platform *Delhi NCR · Dec 2025 – Present*
• Built the monetisation model — a 10% transaction-commission core plus five supporting streams — and sized the market through TAM-SAM-SOM against Luma, Meetup, Eventbrite and BookMyShow; the work sits in the deck behind the ₹1 Cr ask.
• Cut roadmap scope by testing the build queue against what the team actually had — MVP focus, 3 engineers, 9 months of runway — and pulled the non-essential features out. Platform is at **1,100+ organic users and 90+ events on zero marketing spend**.

VINCI Energies (Actemium) — Sales Manager, Industrial Automation *Bengaluru · Jul 2024 – Nov 2025*
• Owned revenue and delivery end-to-end across South India — pricing and techno-commercial offers, sales and marketing, and project coordination through engineering, ops and supply chain. Translated what buyers actually complained about — downtime, energy, compliance — into scope engineers could build.
• Revived a book of **10+ dormant accounts** gone cold from leadership turnover and shelved capex: technical refresh, then discovery, then a proposal built around what surfaced — moving part of the cohort back into qualified pipeline.
• Mapped **3 new market segments** from customer pain, competitor gaps and field adjacency, and wrote the briefs (buyer profile, deal size, entry hypothesis) that were partly adopted regionally. Sequenced go-to-market on deal size × conversion readiness rather than activity volume, so scarce engineering time went where it could actually close.

TD Power Systems — Senior Sales Engineer & Key Account Manager, USA + Europe *Bengaluru · Feb 2022 – Jul 2024*
• Grew Fincantieri (Italy's government-controlled shipbuilder) revenue **70%** by holding weekly progress reviews and full spec-change traceability — a compliance bar that had disqualified most competing suppliers.
• Owned **7 export key accounts** including Solar Turbines, Siemens, Fincantieri and Turboden — converted buyer specifications into priced offers, then ran delivery from close through order-to-cash across engineering, design, production, quality and logistics on multi-time-zone builds.
• Closed the loop after deployment — pulled field failures, warranty patterns and competitor intel out of buyer engineering teams and fed them back as product-line signals.

JC Industries — Sales & Estimation Engineer *Bengaluru · Feb 2018 – Feb 2022*
• **Doubled revenue in one year** by opening a government-tender pipeline from nothing — a revenue stream the company had not been able to access before.
• Owned the pricing: read the tender scope, costed the bill of materials and the engineering effort, and structured bids to stay compliant without giving away margin.

Entrepreneurial journey: Co-founded Siddhi Vinayak Infra-Ventures, a concrete-block manufacturing business in Prayagraj (2017–18) — raised the project finance, sold the product, and ran the plant; won municipal-corporation and housing-society contracts.

EDUCATION & CERTIFICATION

Global PGP in Startup Leadership — LaunchPilot School of Business (Woolf University affiliate, ECTS) *Jan 2026*

IBM AI Product Manager Professional Certificate — Coursera *2026*

B.E. Electrical & Electronics — Visvesvaraya Technological University, Belgaum · 76% *2012 – 2016*
